How I Tutor

Eziechine Deborah | Online Science & Mathematics Tutor

My Approach

I help students understand concepts, not simply memorise answers. My tutoring sessions are calm, supportive, and focused on helping each learner become more confident and independent. I explain difficult topics in simple steps, use examples, ask questions to check understanding, and guide students through practice questions.

Subjects and Support

- Science-related subjects: clear explanations, revision support, diagrams, and practice questions.
- Mathematics: step-by-step problem-solving, worked examples, and targeted practice.
- Academic writing: essay planning, structure, clarity, grammar feedback, proofreading, and document formatting.
- Study skills: revision timetables, goal-setting, organisation, and test preparation.

What a Typical Session Looks Like

Stage	What we do
1. Identify the goal	We discuss the topic, assignment requirement, or problem the student wants to understand.
2. Explain clearly	I break the topic into manageable steps using examples and simple language.
3. Guided practice	The student tries questions or applies the idea while I provide feedback.
4. Review	We correct misunderstandings and summarise the key points.
5. Next steps	The student leaves with practice tasks, revision advice, or a study plan.

My Professional Standards

- I communicate respectfully and keep agreed session times.
- I encourage questions and adapt explanations to the learner's level.
- I protect privacy and treat students professionally.
- I provide tutoring, feedback, proofreading, and study support. I do not complete exams, graded assignments, or coursework for submission as another person's work.

Availability and Contact

Available for remote sessions from **11:00 AM to 2:00 AM WAT**.
